

Specification Page 13 - Amended without Underlining  
And Strikethroughs - Clean Version

6, a lower surface thereof bonded to the main cleaning portion may be subjected to surface treatment, such as degreasing, filling-up, or surface roughening.

As shown in Fig. 1, the base material sheet 6 may have, in its peripheral edge portion, a plurality of strips 10 to form a sub-cleaning portion. In this embodiment, the plurality of strips 10 are provided on either side of the handle mounting portion 2. The base material sheet 6 does not necessarily consist of a single sheet; it is also possible to form it by stacking together two or more sheets. When forming the base material sheet 6 by stacking together a plurality of sheets, the sheets stacked together are not necessarily of the same kind; it is also possible to stack together sheets of different materials, colors, etc.

The fiber bundle 7 is formed as a sheet consisting of a large number of fibers bundled together, and a plurality of fibers may be collected together to a degree that the fibers do not become loose. However, the fiber bundle 7 may also be one in which the fibers are partially connected together by heat sealing, adhesion, etc. as needed. The fiber bundle 7 can be obtained, for example, by a method in

which a large number of sheet-like bundles of filaments are successively bonded together at appropriate intervals in a direction perpendicular to the longitudinal direction of the fibers, and then the intermediate portions between the bonded portions are cut.
